

## *Liquid Mixers from 90 up to 900 litre*

Each coating process requires a premixed slurry, to prevent this premixed slurry from de-mixing/settling it is important to have continuous movement. Hoopman delivers several standard sized liquid mixing systems. Each mixer is made with a cone bottom to be sure that it completely empties.

The mixers up to 300L are standard mounted on swivel wheels which makes it extremely easy to move around you plant. Each mixer is frequency controlled to let it have a intensive mixing when the liquid blend is made, and have it a less intensive, but slow movement to prevent de-mixing/settling

We have several different standard sizes available, from 90 up to 900L. Ask us for more information.

### Technical information

|            |   |
|------------|---|
| Power      | 1x230 Vac +N (from 90-300L)<br>3x400 Vac +N (from 300-900L) |
